PROFESSIONAL SUMMARY

Software Engineer with 2 years of production experience. At Crisalu Games I build gameplay, persistence and multiplayer networking systems in C#/Unity for Goblin Cleanup, a game published by Team17 on Steam. At CONICET, Argentina's national research council, I built Java/Spring Boot backend features for SIGERH, a nationwide HR system used by more than 30,000 people, on a MySQL schema of 300+ tables. Before that, I spent over 10 years in data management and video post-production at CONICET Documental. I use AI (Claude API, Claude Code, MCP, n8n) to build tools and speed up code reviews and automation. English: B2.

TECHNICAL SKILLS

Languages: C#, Java, TypeScript, JavaScript, Kotlin, Python, SQL, HTML5, CSS3

Game Development: Unity, FishNet (multiplayer netcode), Steamworks SDK, UI Toolkit, Input System, Cinemachine, state serialization and persistence

Backend: Spring Boot, Hibernate, JPA, Struts 2, REST APIs, OpenAPI/Swagger, JasperReports, layered architecture, design patterns, OOP

Databases: MySQL, PostgreSQL, Flyway (migrations), relational modeling, SQL query optimization

Frontend: React, TypeScript, asynchronous REST API consumption, state management, WordPress

Testing & DevOps: JUnit, Mockito, Testcontainers, integration testing, CI/CD (GitHub Actions, Jenkins), Docker, Docker Compose, Git, GlassFish, Linux

AI & Automation: Claude API (Anthropic Java SDK), structured outputs, Claude Code, Model Context Protocol (MCP), n8n, prompt engineering, NumPy, Pandas

Methodologies: Scrum, Kanban, code review, Clean Code, Jira

PROFESSIONAL EXPERIENCE

Software Engineer (C# / Unity) · Crisalu Games Aug 2025 – Present · Remote

Goblin Cleanup: co-op multiplayer game for up to 4 players, published by Team17 on Steam. Started part-time alongside CONICET, then moved to full-time.

- Designed from scratch the save and restore system for multiplayer sessions of up to 4 players (serialization, checkpoints and entity rebuilding with host-authoritative state), compatible across game versions, in C# with FishNet.
- Cut reported desync bugs by 70%, resolving around 50 issues by diagnosing race conditions and fixing real-time client-server synchronization logic.
- Built the emote system synchronized in multiplayer, the in-game photo mode, and keyboard and gamepad navigation across all menus with UI Toolkit, with Steam Deck support.
- Implemented the game's achievements system with the Steamworks SDK.
- Integrated Claude Code with Unity through the Model Context Protocol (MCP) and built custom agents and skills that audit the code before every pull request to catch bugs and speed up refactors.
- Resolved 300+ Jira tickets working with Scrum and Kanban, and handled technical communication in English with the publisher, Team17.

Java Backend Developer · CONICET Sep 2024 – Oct 2025 · Buenos Aires

SIGERH: nationwide human resources system with more than 30,000 users.

- Built the working-hours certification module for HR certifiers: search an employee's clock-in records by CUIL (national tax ID) and generate a monthly PDF report with JasperReports showing entry and exit times and hour differences (Java, Spring Boot, Hibernate, Struts 2).
- Built the bank account change module: an admin-only request queue to approve or reject changes, bank entity CRUD, and all form validations.
- Implemented CBU (Argentine bank account number) validation using its weighted check-digit algorithm, verifying that the account matches the selected bank and showing the user the corresponding error.

- Optimized the SQL queries behind the request filters on a MySQL schema of 300+ tables, noticeably reducing response times, and resolved 6–7 production incidents per week.

Data Manager & Post-production Assistant · CONICET Documental Aug 2013 – Aug 2024 · Buenos Aires

CONICET's production company: science documentaries for Argentina's public TV channels (TV Pública, Paka Paka, Encuentro).

- Managed backup and organization of 300+ TB of raw footage from filming trips, preparing drives and backups, with zero data loss in over 10 years.
- Catalogued raw footage in Excel after reviewing it, and selected material for the editing team of 35+ documentaries.
- Prepared scripts and transcripts of finished programs for delivery to broadcasters, and adapted closed captions for deaf and hard-of-hearing viewers for in-flight broadcast on Aerolíneas Argentinas.
- Maintained the company's WordPress website (documental.conicet.gov.ar) and produced social media videos with Adobe Premiere Pro.

IMDb credit: post-production on the feature film Maelstrom: 2001 (imdb.com/name/nm16454992).

PROJECTS

Steam Review Insights (Spring Boot, Claude API, n8n) github.com/camitermine/steam-review-insights

- Built a Spring Boot REST API that imports Goblin Cleanup's 2,367 reviews from Steam's public API and classifies them with Claude Haiku 4.5 across 24 languages, surfacing 449 bug reports and 344 feature requests for less than USD 1.
- Cut classification cost by batching 20 reviews per request with structured outputs, and designed batch processing to resume without data loss if the API fails.
- Automated a weekly Discord digest of new bugs and feature requests with n8n, and containerized the app with PostgreSQL, Flyway migrations and Docker Compose; CI on GitHub Actions with 15 tests (JUnit, Mockito, Testcontainers).

Neural network from scratch (Python, NumPy) github.com/camitermine/TpRedesNeuronales

- Built and trained, without ML frameworks, a neural network that classifies player behavior in online games, implementing the linear algebra and backpropagation by hand.

CodeBricks: Arkanoid in 8086 Assembly github.com/camitermine/TP-Final-SPD

- Programmed an Arkanoid-style game entirely in 8086 Assembly, with no engine or libraries: low-level rendering, input and game logic (TASM, DOSBox).

n8n automation bots UNSAM

- Built 2 n8n workflows: a WhatsApp bot that answers FAQs and forwards questions by email, and an automated newsletter delivered to Discord.

MercadoLite: full-stack e-commerce (TypeScript, React) UNSAM

- Built a web app with an MVC architecture, reusable React components and strict TypeScript typing, consuming a REST API asynchronously.

EDUCATION

University Degree in Computer Programming · UNSAM (Argentina) 2022 – 2027 (expected)

Relevant courses: Concurrent and Distributed Programming, Computer Networks, Databases, Algorithms I, II and III, Artificial Intelligence.

Enterprise Java & Spring Boot · Udemy 2024 – 2025

Full Stack Java · Agencia de Aprendizaje a lo largo de la Vida 2023 · 6 months

React · Oracle 2023

LANGUAGES

Spanish: native · English: B2 (daily technical communication with the international publisher Team17)
